

Created from high-grade tempered aluminium (T6 extrusion BS EN 755 (1-9)), our Eco Trolley Shelters are anodised for a satin finish that will withstand the elements without corrosion or rusting over time. The side and roof glazing is made from tough but stable 3mm clear polycarbonate, complemented by two zinc-plated steel front leg guards to protect the entrance to the shelter and trolleys from any damage caused by accidental impact. The Eco Trolley Shelter is designed to fit in a standard car parking space.
